

Schools have a new tool for success

The NEW Course Access...

...will give district schools direct access to a wide range of courses for their students, providing an economical way to give their students the courses they need. Missouri's new MoCAP system offers cost savings, real-time feedback on student success, the ability to create your own state-wide courses, opportunities for early graduation, and access to CTE programs.

Major cost savings for small districts

Virtual education provides schools an a la carte collection of sought after courses at a much lower cost than hiring qualified teachers to teach those courses in each district. And even if a student chooses to take a full-time virtual program, because the law caps tuition at the state adequacy target then district schools will never lose money to students taking virtual programs.

Home-grown course offerings

Districts can create their own virtual courses (either by themselves or in conjunction with a company like K12) and offer them to the entire state through the MoCAP system and generate additional revenue for their district.

Real-time monitoring of student achievement

A virtual classroom environment means that instructors have real-time access to student assessments and can monitor everything from the amount of time student is logged in to a course to which questions they are missing on a test as they take it. This immediate data gives instructors the power to personalize learning for greater success.

Helps students get to and through college

Because students can take virtual courses at their own pace, many are able to graduate early or choose to take additional AP or college level courses to improve their chances at scholarships and reduce tuition at college. Students also get valuable experience taking online courses which are a growing part of college success.

Large course selection

See full selection at movip.org

Courses offered include Algebra 1&2, American government, American History, Art, Biology, Calculus, Chemistry, Creative Writing, Economics, English 1-4, Geography, Physics, Psychology, Statistics, World History and AP Calculus, AP Government, Computer Science, AP English, AP US History, AP European History, AP Psychology, and AP Statistics

Learn More

Districts like rural Grandview R-II have been using virtual education to thrive for years. Learn more about their story and how course access can help your school at: ceamteam.org/virtual
